ABSTRACT

PURPOSE: To simplify the display of the supplementing number of products in the same group when the same products are stored in plural columns.

CONSTITUTION: A remote controller 4 is operated and a group number table corresponding to respective selection keys 1-1 to 1-N is generated in RAM 5. A supplementing number counter counts up or counts down for respective groups in accordance with the selling of the products. When the selection key 1-1 is depressed without throwing in coins, a number requiring the supplement of the group 1 is displayed in a price display unit 2.
